

This is to familiarise the basics of shell scripting

1. How to write a shell script that will add two nos, which are supplied as command line argument, and if this two nos are not given show error and its usage
2. Write script to print given number in reverse order
3. Write script to print nos as 5,4,3,2,1 using while loop
4. A script to find the files within a given date range
5. Print content of text files in a folder (read name of the folder from user)
